Lab Task: (submit within lab hour, at best within today)

Text file

1. **Read program from a file and detect all the tokens (e.g. valid or invalid identifier, keyword, operator) from the file. In fact we have to correct the limitations of the above program.**

H.W. (submit within one week)

1. **Read program from a file and detect all the delimiters, integer, real number from the file.**

1. make a program, then read file with c++, make token for each line(1 word per line), then it will show what type if token each of them

2. same as 1, but this time multiple tokens per line
